Vitamins are supplements included in the animal feeds in small amounts for the overall growth, well-being and performance of the livestock. Deficiency of vitamins can be adverse to the health of the animals and will also lead to a wide range of diseases. Vitamin supplements are considered necessary in animal feeds for all kinds of livestock, and this has traditionally fuelled the animal feed vitamins market. Modern feeds are produced by selecting specific ingredients that provide a high nutrition diet to livestock for their better health and also for obtaining good end products like milk, egg, and meat.
