Vitamin & Mineral Premix Powders are blended nutritional ingredient powders containing selected vitamins, minerals, carriers and processing aids in controlled ratios. They are used to fortify foods, beverages, dietary supplements, infant nutrition, animal feed and functional nutrition products. The premix format improves dosing accuracy, formulation consistency, handling efficiency and nutrient distribution in downstream production. The market includes customized and standard premix powders for food, nutrition and feed applications, but excludes single vitamins, single mineral salts, finished tablets, capsules and ready-to-drink nutritional products.

The industry chain includes vitamins, mineral salts, carriers, antioxidants, anti-caking agents, stabilizers, flavor masking materials, packaging and blending equipment. Midstream production covers formula design, weighing, premixing, blending, sieving, metal detection, quality testing, stability control and packaging. Downstream demand comes from food manufacturers, beverage producers, supplement brands, infant

nutrition, animal feed mills, sports nutrition and institutional nutrition products. Growth is driven by fortification policies, health awareness, functional foods, feed nutrition optimization and demand for customized nutrition solutions.

Vitamin & Mineral Premix Powders are key additives for feed, food and health products. They feature stable ingredients and precise proportioning. Rising health awareness and livestock farming expansion drive demand. Products will be customized for different usage scenarios and groups.
