The global Vitreous Carbon market size is predicted to grow from US$ 92.5 million in 2025 to US$ 113 million in 2031; it is expected to grow at a CAGR of 3.4% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Glassy carbon, also called vitreous carbon, is a non-graphitized carbon which combines glassy and ceramic properties with those of graphite. It takes its name from its shiny, concoidal fracture surface, i.e. it looks like glass. The most important properties are high temperature resistance, extreme resistance to chemical attack, and impermeability to gases and liquids. Glassy carbon is widely used as an electrode material in electrochemistry, as well as for high temperature crucibles.

Limited by high technical barriers, there are only six major suppliers all over the world, such as HTW Hochtemperatur-Werkstoffe, Tokai Carbon, Mersen, NEYCO, SPI Supplies and Alfa etc. HTW Hochtemperatur-Werkstoffe, a company based in Germany, is the market leader in this industry with sales share of 61.19% in 2017.
