VOC concentration rotor is made of honeycomb inorganic paper as a substrate, in which the High-Silica zeolite, Activated Carbon (Molecular Sieve), etc. is impregnated. The rotor is divided into 3 zones such as process, desorption and cooling zones by the casing structure and heat resistance air sealing. The VOC concentration rotor is constantly rotated at the optimum rotation speed by a geared motor.

Globally, the VOC concentration rotor industry market is concentrated as the manufacturing technology of VOC's Rotor is relatively matures than some high-tech equipment. And some enterprises, like Munters, Seibu Giken, Nichias, etc. are well-known for the wonderful performance of their VOC concentration rotor and related services. At the same time, China is remarkable in the global VOC concentration rotor industry because of their market share and lower cost of raw material and labor. In the coming years there is an increasing demand for VOC concentration rotor in the regions of China that is expected to drive the market for more advanced VOC concentration rotor. Increasing of automotive fields expenditures, more-intense competition, launches in introducing new products, retrofitting and renovation of old technology, increasing adoption of VOC concentration rotor will drive growth in China markets. However, the most important factor is the releasing of the government policy in China.
