According to this study, the global VOCs Cruise Monitoring Vehicle Rental Service market size will reach US\$ 456 million by 2031.

The VOCs cruise monitoring vehicle rental service refers to the provision of special vehicles equipped with advanced monitoring equipment (such as proton transfer reaction mass spectrometers, portable gas chromatography-mass spectrometry, etc.) to users in the form of leasing for mobile monitoring of volatile organic compounds (VOCs). This service conducts real-time and continuous monitoring of VOCs in the atmospheric environment while the vehicle is driving, and combines geographic location information to quickly obtain the spatial distribution and dynamic changes of pollutants, providing data support for pollution source investigation, environmental law enforcement and emergency monitoring. The rental service usually includes supporting services such as vehicle and equipment operation training, data analysis and processing, and report generation. Users can choose different monitoring parameters (such as alkanes, alkenes, aromatic hydrocarbons, etc.) and monitoring duration according to their needs. This service has the characteristics of strong mobility, fast response speed, and wide monitoring range. It can effectively make up for the shortcomings of fixed monitoring sites and provide technical support for the precise control of air pollution.
