The global VOCs Scrubber market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A VOCs scrubber is a device specifically designed to remove volatile organic compounds from exhaust gases. It uses physical or chemical methods to transfer VOCs in the exhaust gas to the liquid to achieve the purpose of purifying the exhaust gas. VOCs scrubbers usually include components such as an absorption tower, a scrubber circulation system, and an exhaust gas treatment system, which can effectively remove VOCs in exhaust gas and reduce environmental pollution.

With the diversification of exhaust gas treatment needs, VOCs scrubbers may be integrated with other exhaust gas treatment equipment (such as activated carbon adsorbers, catalytic burners, etc.) to form a multifunctional exhaust gas treatment system. This integrated system can treat multiple pollutants at the same time and improve the comprehensive effect of waste gas treatment.
