Voice Coil Motors (VCM), also called Voice Coil Actuators (VCA), are a very mature design that utilizes a magnet and yoke in conjunction with a coil. The coil and magnet are concentric about a common axis and there exists an engineered magnetic return path.

Voice coil motors are applications of the principle of coils, which generate force when placed in a magnetic field and subjected to an electric current. Unlike ordinary motors, voice coil motors are based on rectilinear motion. Because the coil is the only moving component, they allow for both high-speed motion and accurate positioning.

It's typically used as the camera's focus function. The mobile phone camera has widely used VCM to achieve the function to focus the lens automatically. VCM can adjust the position of the lens to present a much clearer image.
