The global VoIP SIP Gateway market size is predicted to grow from US\$ 1761 million in 2025 to US\$ 2733 million in 2032; it is expected to grow at a CAGR of 6.7% from 2026 to 2032.

In 2025, global sales of VoIP SIP Gateway reached approximately 3 million units, with an average market price of about USD 600 per unit, an annual production capacity of roughly 3.8 million units, and an industry-average gross margin of approximately 35%.

A VoIP SIP gateway is a hardware appliance or software function that bridges legacy telephony systems (analog phones, digital trunks, PBXs, etc.) with IP-based VoIP networks, using the Session Initiation Protocol (SIP) as the primary signaling protocol. It accepts voice from analog or PRI/TDM circuits, performs codec processing and packetization, and converts it into IP voice streams; in the opposite direction, it translates SIP sessions and RTP media from the IP network back into signaling and audio formats understood by traditional telephony equipment, thereby enabling seamless interworking between PSTN/legacy PBXs and SIP trunks, cloud PBXs, and unified communications platforms.

On the upstream side, VoIP SIP gateways rely on telecom-grade SoCs/DSPs, general-purpose CPUs, memory and RF/networking semiconductors, plus PCBs, metal/plastic enclosures, and power modules assembled by EMS/ODM partners; the finished products fall under telecommunications and networking equipment manufacturing, alongside routers and switches. Downstream, key customers include carriers, hosted voice providers, system integrators, and large numbers of SMEs, call centers, and multi-site enterprises, so actual consumption closely tracks the migration from traditional TDM voice to VoIP/SIP trunking and cloud communications. As the global VoIP services

market keeps expanding and installed PBX bases are gradually upgraded, VoIP SIP gateways continue to be purchased on a 'per-port/per-project' basis, with demand shifting over time toward higher-density, more software-centric solutions.

The VoIP SIP gateway market sits at the intersection of legacy telephony and modern IP communications, acting as the 'bridge hardware' that lets enterprises and service providers migrate from TDM/PSTN systems to SIP trunks, cloud PBXs and unified communications platforms. Demand is shaped by several overlapping trends: operators decommissioning traditional PRI/E1 lines, enterprises consolidating branch voice infrastructure, and the rapid adoption of cloud telephony and hybrid architectures where on-prem PBXs must coexist with hosted UC services. While low-end analog gateways are relatively commoditized and face price pressure, there is still resilient demand for mid- to high-density gateways with strong interoperability, security and management features, especially in verticals with heavy regulatory or legacy system constraints such as finance, government and healthcare. At the same time, some pure 'TDM'IP conversion' use cases are gradually declining as all-IP architectures and SBC/eSBC solutions absorb part of the gateway role, so the strategic focus in this market is shifting toward value-added capabilities (resilience, encryption, survivability, monitoring) and tight integration with broader UC and cloud network platforms.
