The global Voltage Feedback Amplifiers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The voltage feedback amplifier is an important component of analog circuits. It feeds back part or all of the output voltage to the input stage through a feedback network and compares it with the input signal to form a closed-loop control. This feedback mechanism allows the output voltage of the operational amplifier to maintain a certain proportional relationship with the input voltage, thereby achieving functions such as signal amplification, filtering, and comparison.
