The volute double-suction centrifugal pump is a mechanical equipment widely used for large flow and high head liquid transportation. It is commonly used in water treatment, water supply, fire fighting, drainage and petrochemical industries. Its main feature is the double-suction impeller design. The liquid enters from both sides of the impeller, effectively balancing the axial force of the pump, reducing bearing wear, and improving equipment stability and service life. The design of the volute part can change the flow direction of the liquid and increase the pressure, thereby improving the working efficiency of the pump. This pump has the advantages of low vibration, low noise and high efficiency and energy saving. It is suitable for handling large amounts of liquid and providing high head.

United States market for Volute Double Suction Centrifugal Pump is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
