VR Heart Surgery Simulator is a cutting-edge technology that uses virtual reality to simulate surgical procedures related to the heart. It allows medical professionals, particularly cardiac surgeons and doctors, to gain more experience and practice in a simulated environment before performing actual surgeries on human patients.

The simulator provides a realistic view of the inside of the heart, enabling doctors to practice various surgical procedures, including bypass surgery, valve replacement, and more. The VR headset used in the simulator tracks the user's head movements, and the controller mimics surgical tools such as scalpels, scissors, and forceps. The haptic feedback provided by the VR device gives the user a sense of touch, thus enhancing the immersive experience.

This technology offers several benefits, including reducing the risk of complications and errors during surgery, improving patient safety, increasing surgeon confidence and competence, and facilitating better communication and collaboration amongst medical teams.
