Methicillin-resistant *Staphylococcus aureus* (MRSA) and vancomycin-resistant Enterococci (VRE) are specific, antibiotic-resistant bacteria that spread by contact and can cause serious infections. MRSA can be spread by touching articles that have been contaminated by the skin of an infected or colonized person, such as towels, sheets, and wound dressings; VRE can be transmitted by touching articles soiled by an infected person's feces. Both of these bacteria survive well on hands and for weeks on inanimate objects. Colonization occurs when bacteria are present on or in the body (i.e., nose, skin, rectum, moist areas of the body and the newborn's umbilicus) without causing illness.

An antibiotic is a type of antimicrobial substance active against bacteria. It is the most important type of antibacterial agent for fighting bacterial infections, and antibiotic medications are widely used in the treatment and prevention of such infections. They may either kill or inhibit the growth of bacteria.

The market for VRE and MRSA antibiotic market is fragmented with players such as Pfizer, Lilly, Sanofi Aventis, Merck, Fresenius Kabi, Xellia Pharmaceuticals (Novo Holdings), Zhejiang Medicine, Zhejiang Hisun Pharmaceutical, North China Pharmaceutical.
