The global Wafer CMP Machine market size is predicted to grow from US$ 3825 million in 2025 to US$ 7522 million in 2031; it is expected to grow at a CAGR of 11.9% from 2025 to 2031.

Chemical Mechanical Polishing is more commonly known as CMP Polishing. This is the process where the top surface of a wafer is polished with a slurry containing an abrasive grit, suspended within reactive chemical agents. The polishing action is partly mechanical and partly chemical. The mechanical element of the process applies downward pressure while the chemical reaction that takes place increases the material removal rate and this is usually tailored to suit the type of material being processed.

According to our Semiconductor Research Center, in 2022, the global semiconductor equipment was valued at US$ 109 billion. China mainland, China Taiwan and South Korea have a combined market share over 70%. North America, Europe and Japan, have a combined market share of 23%. The key drivers are high performance computing, AI, cloud computing, Servers, 5G and EV (electric vehicle), etc.
