Wafer Edge Trimming Equipment refers to the machines used in semiconductor manufacturing to trim the edges of wafers. During wafer fabrication and processing, the edges may develop irregularities or excessive material buildup, which can cause issues in subsequent manufacturing steps, such as chipping, warping, or particle generation. By using Wafer Edge Trimming Equipment, the excess material on the wafer edge can be precisely removed, ensuring the wafer's dimensional accuracy and edge quality, thereby enhancing the overall performance and reliability of the wafer.

The global Wafer Edge Trimming Equipment market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
