A Wafer Frame Mounter is a semiconductor backend equipment used to mount thin wafers onto dicing frames or adhesive films for subsequent processing steps such as dicing, packaging and handling. It ensures precise alignment, tension control and contamination-free handling of wafers during mounting operations. The system is widely used in wafer-level packaging, advanced packaging, MEMS and semiconductor manufacturing processes. It excludes wafer dicing saws and lithography equipment.

The upstream industry includes precision motion systems, vacuum components, vision systems, servo motors, control electronics and adhesive materials. Midstream involves equipment design, mechanical integration, software control, calibration and cleanroom assembly. Downstream applications include semiconductor packaging, wafer fabrication, MEMS production, advanced packaging and outsourced semiconductor assembly and testing facilities. Market demand is driven by advanced packaging technologies and semiconductor miniaturization trends.
