A Wafer Handling Monitor is a specialized tool or system used in semiconductor manufacturing to ensure the safe and efficient handling of silicon wafers during various stages of production. These monitors are designed to track and assess the movement, positioning, and condition of wafers as they are processed through automated equipment. Wafers, being delicate and costly, require precise handling to avoid damage such as scratches, cracks, or contamination. The wafer handling monitor helps detect errors, prevent mishandling, and improve yield by ensuring that the wafers are properly aligned and safely transferred between processes like lithography, etching, or deposition.
