Wafer hidden crack detection machine is a high-precision automated inspection equipment specially used to detect micro-cracks on the surface and inside of wafers. It uses optical imaging and advanced algorithms to detect tiny cracks that are difficult to observe with the naked eye. The equipment is characterized by its fast detection speed, high resolution and low false alarm rate. It can perform non-destructive detection without touching the wafer, ensuring the integrity of the wafer during the detection process. Compared with traditional manual inspection methods, wafer crack detection equipment has significant advantages in accuracy, efficiency and reliability. It can greatly improve production efficiency and product yield, reduce subsequent process problems caused by cracks, thereby reducing production costs. costs and enhance the market competitiveness of enterprises.
