Wafer laser stealth dicing machine is a cutting equipment that uses laser stealth dicing technology. Stealth Dicing technology is a laser dicing technology that uses lasers, which has such features as the 'completely dry process', 'no kerf loss', 'no chipping', 'high bending strength' and the like. Stealth Dicing technology is a technology that focuses a laser beam of a wavelength that permeates through materials, focus internally and forms a starting point for cracking the wafer, then applies external stress to the wafer, separating it. The process is comprised primarily of two parts, namely the 'laser irradiation process' in which the SD layer is formed to crack the wafer interior and the 'expansion process' for separating the wafer.

The global Wafer Laser Stealth Dicing Machine market size is projected to grow from US\$ 64.2 million in 2024 to US\$ 90.8 million in 2030; it is expected to grow at a CAGR of 6.0% from 2024 to 2030.
