## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

WLCSP (Wafer Level Chip Scale Packaging) is a wafer-level chip packaging method, which is different from the traditional chip packaging method (cutting and packaging, and at least 20% of the original chip volume after packaging). The entire wafer is packaged and tested, and then cut into individual IC particles, so the volume after packaging is equivalent to the original size of the IC die. WLCSP's packaging method not only significantly reduces the size of the memory module, but also meets the high density requirements of portable devices for body space; on the other hand, in terms of performance, it also improves the speed and stability of data transmission.
