The global Wafer Level WAT Test Equipment market size is predicted to grow from US$ 700 million in 2025 to US$ 1938 million in 2032; it is expected to grow at a CAGR of 16.0% from 2026 to 2032.

WAT(Wafer Acceptance Testing) is a series of tests performed at the final stage of wafer manufacturing to evaluate its electrical parameters by measuring specific test structures on the wafer. These test structures are not used for actual chip functions, but are specially designed to detect and monitor various aspects of the manufacturing process. Typically, these tests are performed after the wafer manufacturing process is completed and before the final chip packaging and quality inspection. In 2024, the global production of wafer-level WAT testing equipment was approximately 908 units, with an average price of USD 671,000 per unit.

Wafer Level WAT test equipment is becoming increasingly critical as semiconductor process nodes advance toward 5nm and below. With shrinking process margins, chipmakers are placing greater emphasis on parametric test precision, throughput, and automation to ensure process control and device reliability. Leading foundries such as TSMC, Samsung, SMIC, and GlobalFoundries have integrated WAT as a core step in both R&D and high-volume production. The market trend shows growing demand for fully integrated systems combining probe stations and parametric analyzers, with vendors like FormFactor, Keysight, and Keithley leading globally. In China, domestic players such as AccoTEST and JCE Test are gaining momentum, especially in 28nm and mature nodes, supported by national localization initiatives. Looking ahead, the evolution of 3D integration and advanced packaging is expected to drive further innovation in WAT equipment, with new requirements for vertical structure testing, multi-layer interconnect analysis, and enhanced reliability screening.
