A wafer plasma dry strip machine is a device used in semiconductor manufacturing processes. It utilizes plasma technology to remove photoresist and other organic substances from the surface of wafers. Operating in a vacuum environment, it excites reactive gases into plasma via a radio frequency power supply. The active particles in the plasma then undergo physical and chemical reactions with the organic substances on the wafer surface, decomposing them into gaseous products that are subsequently exhausted, thus achieving surface cleaning and treatment of the wafers. It is characterized by high stripping efficiency, good selectivity, and minimal damage to wafers.

United States market for Wafer Plasma Dry Strip Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Wafer Plasma Dry Strip Machine is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
