Walk-through sole cleaner is an entryway sole cleaning device designed to address the issue of dirt and dust being tracked into indoor spaces via shoe soles. Its operating principle typically involves automatic induction activation of the sole cleaner, with wet conveyor belt brushes rotating to frictionally clean the soles, thereby removing dirt and dust, blocking it at the entrance, reducing the workload of indoor floor cleaning, and establishing a barrier for maintaining indoor environmental cleanliness.The Walk-Through Sole Cleaner boasts multiple functions, such as radar microwave induction, automatic rotation of conveyor belt brushes, automatic water inlet via solenoid valves, water level sensors transmitting liquid level information, automatic leakage protection, automatic sewage discharge by high-pressure water pumps, and automatic water change control by controllers. These functions work in coordination to achieve highly efficient sole cleaning results.
