Walkable Glass Skylight is a structural architectural element that combines the functionality of a skylight with the durability of a load-bearing surface. Designed to be installed flush with flooring surfaces such as rooftops, terraces, or decks, these skylights allow natural light to penetrate into the spaces below without sacrificing usable surface area above. Constructed from multiple layers of laminated, tempered glass—often incorporating low-iron or low-emissivity coatings—they are engineered to withstand pedestrian traffic and, in some cases, even vehicular loads. Safety features such as anti-slip textures, sandblasted finishes, and integrated drainage systems are commonly included to ensure slip resistance and prevent water infiltration. Beyond their practical benefits, walkable glass skylights serve as striking design features that enhance the aesthetic appeal of both residential and commercial spaces.?
