The wall detector is an electronic instrument used to locate and detect various metal and non-metallic objects inside the wall. Based on the principle of electromagnetism, it uses high-frequency electromagnetic waves to emit from the detector and penetrate the wall. When touching metal or non-metallic objects, reflection and absorption phenomena will occur. Wall detectors have multiple detection modes, accurate measurements, and are easy to operate. They are widely used in construction, geological exploration, transportation, tunnels, mining and other industries.

The global Wall Detector market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
