A wall-mounted AC electric vehicle charger is a device fixedly installed on a wall, designed to provide AC charging for electric vehicles. Its working principle involves processing the incoming AC power (typically AC power from residential or commercial electricity) through internal transformers, rectifier circuits, and other components to convert the voltage and current into an AC form suitable for charging electric vehicle batteries. The outputted AC power is generally connected to the charging interface of the electric vehicle through a charging gun and charging cable, enabling the vehicle to be charged. Through mobile apps and the control system on the device, users are able to initiate charging, set and adjust charging times.
