The global Wall-Mounted Electric Energy Data Collection Terminal market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

The wall-mounted electric energy data collection terminal is a terminal device dedicated to collecting electric energy data from electric energy meters and transmitting it remotely. It supports a variety of wireless and wired communication methods, supports a variety of meter protocols, and supports the collection of various power data in electric energy meters. The wall-mounted installation is quick and convenient. It is an ideal meter reading system for 35kV substations, 10kV switching stations, small hydropower, industrial and mining enterprises and other places. Ideal supporting equipment for energy management.

With the acceleration of product development by domestic enterprises and the two-wheel drive of new technologies and industrial policies, China's electric energy data collection terminal market will usher in development opportunities in the future. In recent years, driven by factors such as the increase in demand for State Grid and China Southern Grid electricity meters and the increase in the value of single meters due to model upgrades, the overall scale of the industry and the company's market share have shown an upward trend. For example, Oriental Electronics predicts that the company's business in this segment will be 2022-2024. The revenue growth rate is stable at 25%, and the gross profit margin has increased against the backdrop of the increase in the value of a single meter, reaching 33%/33.5%/34% respectively from 2022 to 2024.
