The wall-plate wireless access point is a networking device specifically designed for indoor wireless coverage scenarios, resembling power sockets or information panels typically installed on building walls. It can be directly mounted on wall surfaces or pre-installed within wall recessed boxes. By integrating wireless radio modules, antenna systems, and network interfaces, the device converts wired network signals into wireless signals (e.g., Wi-Fi), providing high-speed and stable wireless access for terminal devices. Its design emphasizes spatial adaptability and aesthetics, featuring a compact structure and concealed installation to avoid visual disruption in indoor environments. It supports functions such as multi-band concurrency, intelligent channel selection, and load balancing to optimize wireless signal coverage and transmission quality. Wall-plate wireless access points are commonly used in corporate offices, hotel rooms, residential apartments, and other settings, seamlessly integrating with existing network infrastructure to enable flexible expansion and centralized management. They are a key component in constructing efficient and reliable indoor wireless local area networks (WLANs).

Typical products include: Ruijie's RG-AP1920, H3C's PL105, etc.
