## Abstracts

Wall ties are construction components used to connect the inner and outer walls (also known as leaves) of cavity wall structures, ensuring stability and structural integrity. They are typically made from corrosion-resistant materials such as stainless steel or galvanized steel. Wall ties help to transfer lateral loads, such as wind pressure, from the exterior wall to the interior wall, preventing them from bowing or collapsing. They also maintain the correct spacing between the walls, allowing the cavity to function as intended, which often includes providing insulation and preventing moisture penetration. Proper selection and installation of wall ties are crucial for the durability and safety of cavity wall constructions in both residential and commercial buildings.

The global Wall Ties market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
