Wallpaper and screensaver software is software that is used to display aesthetically pleasing images or animations on a computer desktop or display. This type of software is intended to provide a personalized desktop background or when the computer is idle. Specifically, wallpaper software allows users to select an image or photo from its gallery or download it from an online wallpaper library and then set it as the desktop background. Users can also adjust how the wallpaper is displayed according to their preferences, such as tiled, centered or stretched. Screen saver software, on the other hand, starts automatically after the computer has been idle for a period of time and displays various patterns, slideshows or videos in animated form. This not only helps to protect the screen from burn-in, but also provides visual enjoyment for the user.

The global Wallpaper and Screensaver Software market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
