WAN Edge Infrastructure Software is a class of networking technology that enables connectivity to distributed IT resources, such as data centers, public clouds, and SaaS applications. It provides this connectivity through a combination of hardware and software that works to provide reliability, security, and efficiency to the network. WAN Edge Infrastructure Software typically includes features such as routing, firewall, SD-WAN, WAN optimization, and WAN path control. WAN Edge Infrastructure Software is often procured by senior networking leaders within an infrastructure and operations (I&O) organization.

The industry trend of WAN Edge Infrastructure Software is driven by the needs of digital

business transformation and the demands of line-of-business managers. The market is undergoing dramatic change as more enterprises adopt cloud-based applications and services, remote work models, and software-defined approaches to networking.

The evolution of WAN edge infrastructure from hardware appliances to software platforms: Software platforms offer more flexibility, scalability, agility, and cost-effectiveness than hardware appliances. They also enable easier integration with other network functions and services. Gartner expects that by 2025, more than 50% of WAN edge infrastructure refresh initiatives will be based on vCPE or SASE platforms versus traditional routers.

The increasing importance of analytics and automation for WAN edge infrastructure: Analytics and automation enable better visibility, control, optimization, and troubleshooting of WAN edge infrastructure. They also help improve user experience, application performance, network efficiency, and security posture. Gartner advises that I&O leaders should prioritize vendors that offer advanced analytics and automation capabilities for their WAN edge infrastructure solutions.
