War Time Ventilation Oil-Mesh Filter is a crucial equipment for the wartime ventilation system in civil defense projects. Its main function is to filter out impurities such as dust and oil mist in the air, ensuring that the air entering the shelter is clean. It is usually installed at the intake of the wartime ventilation system and uses a multi-layer metal wire mesh or special filter materials to form a filtering layer, effectively intercepting and absorbing particles and oil substances in the air. This filter has the characteristics of high filtration efficiency, low resistance, and reusability, and can provide reliable air purification guarantees in wartime or special environments.
