A warehouse execution system (WES) is software that manages, optimizes and directs the physical work processes (picking, receiving, replenishment, etc.) in a warehouse or distribution center. The WES operates in real-time to sequence, manage, and coordinate all the warehouse resources such as devices, material handling equipment, or employees. In addition, WES takes care that orders are moved in a continuous flow. When a situation changes in a single portion of the process, the system would reprioritize work to accelerate fulfilment.
