The warm table mat is a mat that can be put on the table and heated after being electrified. Its main function is to heat and keep warm. Its function is similar to that of electric blanket, and its production process is relatively simple.

The heating principle uses electric energy to make the heating film (the heating film is a film that can generate heat after being electrified) generate heat. The structure of warm table mat is generally three layers, and the bottom layer is anti-skid layer, which is generally made of rubber; The middle is a heating film; The top layer is a protective layer, which can prevent splashing.
