Abstracts

The global Warp-knitted Composite Geotextiles market size is predicted to grow from US$ 209 million in 2025 to US$ 294 million in 2032; it is expected to grow at a CAGR of 5.1% from 2026 to 2032.

In 2024, global Warp-knitted Composite Geotextiles production reached approximately 53.57 million square meter, with an average global market price of around US$ 3.8 per square meter. A warp-knitted composite geotextile is a novel, multi-functional geosynthetic material formed by integrally bonding two or more materials (e.g., geotextiles, geomembranes, geogrids) together using warp-knitting technology with loop structures. Its core innovation lies in leveraging the flexibility of the knitting process to combine the advantages of different materials (such as filtration, drainage, reinforcement, and impermeability) into a single product, achieving a synergistic "1+1>2" effect. It exhibits high integrity, tensile strength, and uniform deformation, enabling it to perform multiple functions simultaneously—including separation, reinforcement, protection, filtration, and drainage (or containment)—thereby simplifying construction procedures and enhancing overall project performance and reliability.

United States market for Warp-knitted Composite Geotextiles is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Warp-knitted Composite Geotextiles is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Warp-knitted Composite Geotextiles is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
