Abstracts

The global Warp-knitted Fiberglass Geogrid market size is predicted to grow from US$ 493 million in 2025 to US$ 675 million in 2032; it is expected to grow at a CAGR of 4.7% from 2026 to 2032.

In 2024, global Warp-knitted Fiberglass Geogrid production reached approximately 193.04 million square meter, with an average global market price of around US$ 2.5 per square meter. A warp-knitted fiberglass geogrid is a planar grid-like geosynthetic material manufactured using glass fiber rovings as the reinforcing material. These rovings are knitted into a mesh substrate via warp-knitting machines and then coated with a specialized polymer coating (typically modified asphalt or PVC). Its core characteristics derive from the high tensile strength, high modulus, low elongation, and excellent corrosion resistance of the glass fibers, combined with the high junction strength and integrity ensured by the knitting process. The protective coating serves to shield the glass fibers from installation damage and long-term chemical degradation while also providing excellent bonding with asphalt mixtures or soil. It primarily functions as a rigid reinforcement material to enhance asphalt pavement layers or soil structures, effectively resisting reflective cracking, distributing loads, and reducing rutting.

United States market for Warp-knitted Fiberglass Geogrid is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
