Beam warping can be used to directly produce the weaver's beam in a single operation, by winding wrap yarns onto a beam especially in preparation for weaving, slashing, and warp knitting. Beaming machines are specially used for direct beaming the strong yarns that do not require any sizing such as when the number of warp ends on the warp beam is comparatively small and continuous. Beaming machines are used in the manufacturing of beam warp yarn, which is then modified into thin and thick large knots.
