The global Washing Machine Bearing market size is predicted to grow from US\$ 1514 million in 2025 to US\$ 2418 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

Global sales of washing machine bearings reached 601 million units in 2025, with an average price of \$2,571 per thousand units.

Washing machine bearings are usually good for around 10 years before they need to be replaced. The bearings are located below the outer tank of the washer. The outer tank is the white plastic part with an inner stainless steel drum. You have to split this tank apart in order to reach the bearing.

The raw materials for washing machine bearings are primarily vacuum-degassed high-carbon chromium bearing steel GCr15 (equivalent to Japanese standard SUJ2). The bearing rings and balls are hardened to 62-66 HRC after quenching and low-temperature tempering. The cage is formed by stamping from 08Al cold-rolled steel strip. The seals are made of soap-resistant, 150?-resistant fluororubber or nitrile rubber. The lubricant is low-noise polyurea-based or lithium-based wide-temperature grease. The total cost of raw materials accounts for 65-70% of the ex-factory price, with bearing steel bars/wires accounting for approximately 45%, and seals and grease accounting for 10-15%. Therefore, fluctuations in steel prices have the greatest impact on cost.
