A washing machine floor drain is a floor drain product designed specifically for washing machine drainage. It is usually installed on the ground next to the washing machine to quickly and effectively drain the waste water discharged by the washing machine. Compared with ordinary floor drains, washing machine floor drains have stronger drainage capabilities and the function of preventing odor and debris from flowing back. They are usually equipped with anti-odor design, filter nets and other accessories to ensure smooth drainage and avoid water blockage or odor problems. In addition, the design of this type of floor drain usually takes into account the high water flow during the use of the washing machine to ensure that there will be no overflow or water on the ground during the drainage process.
