The global Waste Electronics Recycling market size is predicted to grow from US\$ 2802 million in 2025 to US\$ 4368 million in 2031; it is expected to grow at a CAGR of 7.7% from 2025 to 2031.

Waste electronics recycling is the disassembly and separation of components and raw materials of waste electronics after and could be reused in a new electronic appliance.

Information and communication technology (ICT) equipment is the main category of e-waste. ICT equipment includes computers, servers, storage devices, networking equipment, and other consumer electronics such as smartphones and tablets. Proper recycling of ICT equipment can help recover valuable metals such as gold, silver and copper. In addition, recycling ICT equipment can also reduce the environmental impact of e-waste. Home appliances are electronic devices used for household purposes. Home appliances include air conditioners, refrigerators, washing machines and other products. These appliances contain large amounts of copper and other metals that can be recycled through the e-waste recycling process.
