Tool storage is a storage system or a box to be arranged to transport, store and protect toolsets in a single box. The increasing production, DIY, small buildings, and home repairs are more likely to give people a tool storage system at home. Companies now provide portable storage devices, allowing the user to transport the storage system. Two fundamental characteristics of tool storage systems are transport and space utilization. Thus several manufacturers provide value-added features in their tool storage devices, such as USB connections and power bank functions for charging smartphones. Customers have to pay a little premium for such tool storage goods.
