The global Waste Oil Collection and Disposal Service market size is predicted to grow from US\$ 6779 million in 2025 to US\$ 10047 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

Waste Oil Collection and Disposal Service refers to a specialized service provided by companies that collect, transport, and properly dispose of used or waste oils. These oils can include motor oils, cooking oils, hydraulic fluids, lubricants, and other types of oils that have been contaminated or degraded after use. These services are essential for businesses to avoid environmental damage and comply with legal regulations and manage oil waste responsibly and to reduce the environmental impact of improper disposal.

North America is the largest high-value service market. It has mature collection networks, substantial re-refining capacity and strong demand from automotive workshops, fleets, manufacturers and industrial facilities.

Europe has one of the most regulated and mature waste-oil systems. Germany, Italy, France, Spain, the United Kingdom and the Benelux countries are major markets. Companies compete through national collection networks, regeneration capacity, hazardous-liquid treatment and industrial-service contracts.

Asia-Pacific generates the largest total quantity of potentially recoverable used oil, led by China, India, Japan, South Korea, Southeast Asia and Australia. However, average service revenue per tonne is lower than in North America and Western Europe because of lower labor costs, informal collection and the residual commodity value of reusable oil.

The region has the strongest long-term growth opportunity as governments introduce licensing, tracking and extended-producer-responsibility systems and restrict informal burning or unauthorized recycling.
