Waste separators, also known as garbage separators or recycling bins, are containers or devices used to separate recyclable and non-recyclable waste materials from household, commercial, and industrial waste streams.

The primary objective of waste separators is to promote sustainable waste management practices by reducing the amount of waste sent to landfills and increasing the proportion of waste materials that can be recycled or reused. Waste separators can be of various types, depending on the materials they are designed to separate and the location where they are used. Waste separators play a crucial role in promoting sustainable waste management practices and reducing the environmental impact of waste disposal. By separating recyclable and compostable materials from non-recyclable waste, waste separators can help reduce the amount of waste sent to landfills and promote the use of renewable resources.
