Waste Tire Shredding and Recycling System is a comprehensive infrastructure designed to manage used and discarded tires by processing them into reusable materials or safely decomposing them to reduce environmental and health impacts. This system encompasses multiple stages, including collection, transportation, sorting, shredding, and either recycling into new products or final disposal. Key components of the system include tire shredders, which mechanically break down tires into smaller pieces, and tire pyrolysis equipment, which thermally decomposes rubber to produce valuable byproducts such as oil, carbon black, and steel. Together, these technologies enable the efficient conversion of waste tires into materials that can be reused in various industrial applications, supporting sustainability and waste reduction.
