The global Waste Treatment and Recycling Service market size is predicted to grow from US\$ 374001 million in 2025 to US\$ 468125 million in 2032; it is expected to grow at a CAGR of 3.4% from 2026 to 2032.

Waste Treatment and Recycling Service refers to the collection, sorting, transportation, treatment, disposal, and recycling of residential waste, commercial waste, industrial solid waste, construction waste, food waste, electronic waste, and other waste streams. The service typically includes waste collection, mechanical sorting, recyclable recovery, waste-to-energy, landfill disposal, organic waste composting, recycled material processing, e-waste dismantling, and regulated hazardous waste treatment. Its core purpose is to reduce waste volume, minimize environmental risks, ensure safe disposal, and improve resource recovery efficiency.

The Waste Treatment and Recycling Service market is moving from traditional end-of-pipe disposal toward an integrated model combining waste sorting, resource recovery, energy utilization, and low-carbon operation. Driven by stricter waste classification policies, circular economy development, higher urban environmental standards, and increasing ESG and carbon reduction requirements, the industry is placing greater emphasis on intelligent sorting, recyclable material recovery, plastic and metal recycling, waste-to-energy, organic waste utilization, regulated e-waste recycling, and digital full-process management. Overall, waste treatment and recycling services are evolving from basic environmental treatment services into essential infrastructure for urban resource circulation and sustainable development.
