A water barrier is a material that prevents water from entering a building. Water barriers can be broadly classified into two types: those used in civil engineering and construction, and those used to prevent flooding in buildings. Water barriers are used in civil engineering and construction, and are placed at the joints of concrete structures. They are used in the construction of underground buildings and civil engineering works for dams, tunnels, and elevated bridges.

Water barriers used to protect buildings from flooding are used to protect houses and other structures from flooding caused by heavy rains, such as typhoons and guerrilla rains. Water barriers of this type come in a variety of sizes, from small-scale ones for ordinary houses to large-scale ones for preventing rivers from overflowing.
