The global Water-based Bentonite Thickener market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Water-based bentonite thickener refers to a type of thickening agent that is based on bentonite clay and is specifically designed for use in water-based systems. Bentonite clay is a naturally occurring clay mineral that has excellent colloidal properties, which allows it to absorb and retain large amounts of water. Water-based bentonite thickeners work by dispersing the bentonite clay particles throughout the liquid medium, typically water. Once dispersed, the clay particles swell and form a three-dimensional network or gel structure. This gel structure increases the viscosity of the liquid, resulting in a thicker and more viscous consistency.
