The global Water Based Die Lubricants market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

Water-based die lubricants are available in different formulations to suit specific applications and metalworking processes. They typically contain a combination of additives, such as surfactants, corrosion inhibitors, anti-wear agents, and boundary lubricants. These additives enhance the lubricating properties, provide rust protection, and improve the overall performance of the lubricant.

Water-based die lubricants, also known as water-soluble die lubricants or aqueous die lubricants, are substances used in metalworking processes to reduce friction and facilitate the movement of materials during the forming or shaping of metal parts. They are specifically designed to be mixed with water to create a lubricating solution.
