The global Water-based Drilling Fluid (Mud) market size is predicted to grow from US\$ 2924 million in 2025 to US\$ 4733 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

Water-based drilling fluid is a sol suspension mixed system with water as the dispersion medium and clay (bentonite), weighting agent and various chemical treatment agents as the dispersed phase. Its main components are water, clay, weighting agent and various chemical treatment agents.

The water-based drilling fluid system market is expanding as a crucial solution for drilling and oil extraction processes. This system uses water as a base fluid along with various additives to facilitate drilling, cool the drill bit, and transport cuttings to the surface. The market's growth is driven by the demand for environmentally-friendly and cost-effective drilling solutions in the oil and gas industry. Water-based drilling fluid systems offer reduced environmental impact and easier disposal. As regulations and industry practices emphasize sustainability, the water-based drilling fluid system market is expected to continue growing, providing essential tools for efficient and responsible drilling operations while addressing environmental concerns associated with drilling fluid disposal.
