Water-based graphite coatings are environmentally friendly coatings formulated with natural or synthetic graphite dispersed in water. They provide excellent lubrication, high-temperature resistance, electrical conductivity, and anti-adhesion properties for casting, forging, battery manufacturing, and industrial processing.

The market for water-based graphite coatings is expanding as industries shift toward environmentally friendly and low-VOC surface treatment solutions. In metal casting and forging, these coatings provide superior heat resistance, lubrication, and mold-release performance, reducing defects and improving surface quality. The rapid development of lithium batteries and conductive materials also drives demand for graphite-based coatings used in electrode processing and thermal management. Manufacturers are focusing on improving dispersion stability, particle uniformity, and high-temperature adhesion to enhance performance. As environmental regulations tighten and solvent-based coatings continue to be replaced, water-based graphite coatings are expected to maintain strong growth momentum globally.
