The research report highlights the growth potential of the global Water-Based Matte Paint market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Water-Based Matte Paint are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Water-Based Matte Paint. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Water-Based Matte Paint market.

Waterborne matt paint is a special type of paint, whose main component is Waterborne resins. Compared with traditional solvent coatings, water-based matt paint uses water as diluent, which makes it produce less Volatile organic compound (VOCs) during construction and cleaning. The characteristic of this paint is that it produces a matte or semi matte surface effect. Compared to high gloss coatings, it does not reflect light, making the surface appear softer and opaque. Waterborne matte paint is widely used in fields such as indoor walls, furniture, wood products, and decorative engineering. Its advantages include: environmental friendliness: due to the presence of water-based components, water-based matte paint releases lower VOCs, which helps reduce air

pollution and indoor concentration of harmful substances. Applicability: It can be used for various materials, such as wood, gypsum board, metal, etc., making it a universal indoor coating. Easy to clean: Compared to oily paint, water-based matte paint uses water for cleaning, simplifying the cleaning and maintenance process. Low odor: the smell of water-based matt paint is lighter during construction, making the indoor environment more comfortable. It should be noted that although water-based matte paint has many advantages, in some cases, its durability and stain resistance may not be as good as traditional oil-based paint, especially in areas with high flow rates and high pollution. Therefore, when choosing coatings, decisions should be made based on specific application scenarios and needs.
